Product Description

Z-Spray Junior ZSX3624

Meet the all-new Z-Spray Junior 36-inch zero-turn stand-on spreader sprayer. Reengineered from the ground up to be more productive, durable, and easy to use, the Z-Spray Junior is the best choice for applications on tight residential spaces where maneuverability is key. The new bi-directional boom breaks away both forward and back in the event of an impact, significantly reducing the chance of boom damage. Z-Spray Junior is small enough to fit through a 36-inch gate, but with spray widths of up to 8ft and adjustable spread widths from 3ft to 25ft, it can easily tackle larger jobs as well. Powered by a 16 hp Vanguard engine with a 20/50 charging system, the Z-Spray Junior is capable of simultaneously granular and liquid materials applications at up to 7 mph, with zero-turn maneuverability.

Centrally located controls sit at the operator's fingertips for easy reach, and the spray wand has been moved to the right side of the machine for easier access. The patented foam marker activator starts and stops the pump and foam marker simultaneously whether using the toe switch or rocker switch on the control panel (foam marker is an optional accessory).

The new, lower center of gravity design places the operator between the drive wheels, with the heaviest components placed centrally, low in the stainless-steel frame. This maximizes stability and machine balance regardless of the amount of material onboard. The new bi-directional spray boom pivots both forward and back when impacted, so the boom is much less likely to be damaged. The new tank design drains more completely, so less material is left over in the tank, and a tools-free tank drain eases draining the tank. A patent pending flip-up hopper eases access to the engine for service, while a patented magnetic operator pad is easy to remove for access to the spray chart, or for maintenance. A wide range of accessories are available for the Z-Spray Junior, to customize it for your specific needs. Accessories include a 2 gal foam marker, LED light kit, hose reel kit, 7-gallon auxiliary and isolated tanks, a 20-gallon auxiliary tank and vibratory hopper motor.
